

**REMARKS**

The present amendment revises the claims to clarify the features of the invention. In particular, the claims are amended to refer to a cold set print ink that is not used in the claimed invention.

A cold set printing ink is solid at room temperature and is heated to a fluid state during printing. The cold set printing ink solidifies quickly when applied to the paper since the paper is cool relative to the printing ink. The claimed invention excludes the use of a cold set printing ink as in the cited art.

In view of the above, reconsideration and allowance are requested.

Respectfully submitted,
